

distribution of *C. vachoni* may be the central mainland Japan (Boso Peninsula, 35°N) (Murata *et al.*, 1991) and it is also possible that the southern limit would be extended from Shark Bay, Western Australia (25° N) (Morgan, 1991), to the southern part of Australia.

Acknowledgements

We are grateful to Dr. Hin-Kiu Mok of the Institute of Marine Biology, National Sun Yat-sen University, and Kenting Marine Station, College of Marine Science, National Sun Yat-sen University, for partially supporting this study, to Dr. Tomoyuki Komai of the Natural History Museum and Institute, Chiba, Japan, for providing the relevant information on Japanese hermit crabs, to Dr. Hisakatsu Minei of the Zoological Laboratory, Faculty of Agriculture, Kyushu University, Dr. Michio Imafuku of the Department of Zoology, Kyoto University, Dr. Li-Lian Liu of the Institute of Marine Biology, National Sun Yat-sen University, and Drs. Joseph Poupin and Jacques Forest of the Muséum national d'Histoire naturelle for bibliographic help.
